PROFESSIONAL SUMMARY

Data Analyst with 3+ years across utilities, Big-4 consulting, and academic research, plus an M.S. in AI & Business Analytics (GPA 3.89). Partners with operations, engineering, and product stakeholders to translate complex business workflows into precise data, analytics, and reporting requirements. Track record of end-to-end discovery and gap analysis, source-to-target data mapping, UAT and data validation, and self-service dashboard development using SQL, Python, Power BI, Tableau, and Snowflake. Microsoft- and Google Cloud-certified.

TECHNICAL SKILLS

Languages & Querying: SQL (Oracle, Snowflake, BigQuery, PostgreSQL), Python (Pandas, NumPy, scikit-learn), R, DAX

BI & Dashboards: Power BI (Service & Desktop), Tableau, IBM Cognos, Advanced Excel (Power Query, Pivot Tables, Macros)

Analytics & Requirements: Business & data requirements documentation, metric definitions, gap analysis, process mapping, source-to-target mapping, UAT & data validation, data lineage documentation

Data Engineering: ETL/ELT pipelines (Talend), dimensional modeling (star schema, SCD), data warehousing, data quality & governance

Cloud & Platforms: AWS (S3), Google Cloud (BigQuery), Snowflake, Microsoft Fabric, Power Automate, Oracle SQL Developer, Git

PROFESSIONAL EXPERIENCE

Data Analyst — Orlando Utilities Commission

Orlando, FL · May 2025 – Present · Promoted from Data Analyst Intern to full-time Data Analyst (via Acro Service Corp.), Jun 2026

- Partner with Billing & Collections leadership, Billing QA, and data engineering teams to gather and clarify business needs for analytics and reporting; document business requirements, metric definitions, and reporting specifications for new dashboards and reports.
- Designed and deployed interactive, self-service Power BI dashboards to the Power BI Service — building DAX measures, configuring scheduled refreshes, and managing workspace access — giving leadership real-time visibility into operational KPIs.
- Engineered and optimized Oracle SQL queries against CC&B and MDM source systems to query, reconcile, and validate large-scale billing datasets — detecting anomalies and unprocessed adjustments, and tracing issues across upstream sources, transformation logic, and reporting layers before customer invoicing.
- Performed source-to-target data mapping for a Snowflake Revenue Assurance data mart — star-schema fact/dimension modeling with nightly ETL from AWS S3 — and authored a SQL validation test library to enforce data quality standards in the governed reporting layer.
- Supported user acceptance testing (UAT) of billing system changes by designing a data-driven billing-cycle coverage analysis that identified the optimal review sample, ensuring validation coverage across account and rate types.
- Led the “BAC Internal Control” discovery and gap-analysis project, consolidating and analyzing 1,100+ legacy Cognos reports to assess existing analytics coverage, surface key metrics, expose reporting gaps, and guide migration toward modern BI.
- Built a Power Automate workflow automating routing of revenue-assurance cases from Salesforce (Email-to-Case) into the Billing QA queue, replacing manual triage and improving turnaround and traceability.

Associate — PwC (Acceleration Centers)

Hyderabad, India · Mar 2022 – Jun 2024

- Built automated Power BI reporting dashboards that significantly reduced weekly reporting turnaround for client teams.
- Validated and reconciled large-scale structured and semi-structured transactional datasets using SQL and Excel to support high-value audit engagements, identifying and resolving data quality issues.
- Served as liaison between technical teams and non-technical client stakeholders, communicating data-quality findings and driving a measurable reduction in audit exceptions.

Student Assistant — University of South Florida (Muma College of Business)

Tampa, FL · Nov 2024 – May 2025

- Extracted and cleaned semi-structured datasets from BigQuery and SQL databases to support faculty research analytics, building reusable Python-based analysis workflows.
- Created Power BI / Tableau visualizations and summary tables communicating trends to non-technical stakeholders; authored data dictionaries, transformation notes, and data-lineage documentation ensuring reproducibility and long-term maintainability.

PROJECTS

- Enterprise Data Warehouse Design (SQL, Snowflake):** Designed a Kimball star schema with fact and dimension tables for OLAP analysis; implemented Slowly Changing Dimensions (SCD Type 2) to track historical changes for accurate, auditable reporting.
- Differentially Private Fine-Tuning of LLMs (Python, PyTorch):** Built a reusable framework to fine-tune large models (DeBERTa, ViT, Qwen) under formal differential privacy; a low-rank reparametrization cut DP-noised parameters ~500x, holding accuracy within 2–4% of non-private baselines across 8 datasets.

EDUCATION

M.S. in Artificial Intelligence & Business Analytics — University of South Florida, Tampa, FL · Expected May 2026 · GPA: 3.89

B.Tech in Computer Science & Engineering — GITAM University, Visakhapatnam, India · 2018 – 2022

CERTIFICATIONS

Microsoft PL-300 (Power BI Data Analyst) · Microsoft DP-700 (Fabric Data Engineer) · Google Cloud Professional Data Engineer
